Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1-26. (Canceled)

27. (Currently amended) A method of producing <u>and secreting</u> insulin in a subject in vivo, the method comprising introducing into the subject an intermediate lobe pituitary cell that <u>is capable of storing and secreting insulin and</u> comprises a nucleic acid sequence encoding insulin, the nucleic acid sequence being operatively linked to a heterologous promoter that directs expression of the nucleic acid sequence in the intermediate lobe pituitary cell, thereby producing and secreting insulin in said subject.

28-29. (Canceled)

- 30. (Previously presented) The method of claim 27, wherein said intermediate lobe pituitary cell is an autologous cell.
- 31. (Previously presented) The method of claim 27, wherein said subject is a human and the intermediate lobe pituitary cell is an autologous cell.

32-59 (Canceled)

60. (Currently amended) The method of claim 27, wherein said intermediate lobe pituitary cell is an allogenic allogeneic cell.

61. (Currently amended) The method of claim 27, wherein said intermediate lobe pituitary cell is a xenogenic xenogeneic cell.

62-63. (Canceled)

- 64. (Currently amended) The method of claim 27, wherein said cell further comprises one or more nucleotide sequence encoding a protein that controls expression secretion of insulin in a glucose stimulated manner.
- 65. (Currently amended) The method of claim 64, wherein said protein that controls expression secretion of insulin in a glucose stimulated manner is a glucokinase.
- 66. (Currently amended) The method of claim 65, wherein said glucokinase is the pancreatic β-cell isoform of glucokinase.
- 67. (Currently amended) The method of claim 64, wherein said protein that controls expression secretion of insulin in a glucose stimulated manner is a glucose transporter.
- 68. (Previously presented) The method of claim 67, wherein said glucose transporter is GLUT-2.
- 69. (Currently amended) The method of claim 64, wherein said protein that controls expression secretion of insulin in a glucose stimulated manner is an ion channel that mediates glucose-stimulated insulin release.
- 70. (Previously presented) The method of claim 69, wherein said ion channel that mediates glucose-stimulated insulin release is a K+/ATP ion channel.

(Currently amended) The method of claim 64, wherein said protein that controls 71. expression secretion of insulin in a glucose stimulated manner is glucagon-like peptide-1 (GLP-1).

- (Previously presented) The method of claim 64, further comprising evaluating the 72. subject for a parameter relating to glucose metabolism or insulin secretion.
- 73. (Previously presented) The method of claim 72, wherein said parameter is selected from the group consisting of: the amount, distribution or structure of intracellular or extracellular insulin; glucose phosphorylating activity; glucose utilization; glucose uptake; and insulin secretion.
- (Previously presented) The method of claim 27, wherein said promoter is a pro-74. opiomelanocortin (POMC) promoter.

75-78. (Canceled)

- (Previously presented) The method of claim 27, wherein said intermediate lobe 79. pituitary cell is a fetal or post natal cell.
 - (Previously presented) The method of claim 27, wherein said subject is a human. 80.
- (Previously presented) The method of claim 27, wherein said intermediate lobe 81. pituitary cell is a cultured cell.
- (Previously presented) The method of claim 81, wherein said cultured cell is a 82. cultured human cell.

83. (Previously presented) The method of claim 27, wherein said cell is from a non-human transgenic animal.

84-85. (Canceled)

86. (Previously presented) The method of claim 27, further comprising the step of administering an immunosuppressant to the subject.
